Versioning System

For our Project we will not be using any versioning system. The types of contents in our project for which the versioning could be used are questions and answers. But we have decided that for questions, only one version post(question) for a particular Course will be uploaded depending upon admin approval. If there are more than questions upload with the same content admin will choose only one. For answers any number of posts can be added for the same subject, but they won't be of different versions though and each answer will get a unique id.
