Summary of Criticism and Action Plan

In **Group 8** critique of our website, they appreciated the work we are doing and said that our website is very user friend and easy to user even for novice. They wanted to know about the addition features for our project, regarding that we will try to add post to related Facebook group after it has been approved and also add Facebook comments. Also we are trying to allow only AIT students to login, and plan to LDAP for that purpose. We will also add the feature that will allow admin to delete any post after it has been posted. About adding teachers to our site, it's quite a good idea, we can give them semi-admin rights, for example approving questions and solutions. Search feature is also and we, will implement it depending upon the time constraint. About the interface being minimalistic, since we and making and fancy website like an advertisement website, so minimalistic interface and simple controls are good for our targeted audience.

Group 1 mostly praised about the design and basics structure of our website. They found it simple and easy to use. Only grievance they had was that our website didn't have the search feature. As we said earlier to would try to add it depending upon the time constraint. Also our upload link is not working in the server but its fine in the development mode and should be fine by the next version.

We would like to thank both group 1, 8 for their positive feedback and would like to let them know that each of their criticism is taken in a positive way.
